

SERVICE THROUGH INNOVATION

## ICE R SCRUB 85 D NSC

The ICE R Scrub 85 D (NSC) is supplied complete with an on board Non Stop Cleaning system. This means that the same water can be re-used for a week without having to empty and re-fill the tanks.

Not only does this dramatically cut water consumption, but also results in longer run times and increased productivity, giving labour savings of up to 25%.

Additionally the self-cleansing function of the filtering system gives a saving of up to 90% on water costs associated with cleaning operations.

## HOW IT WORKS:

Aqua Smart (Non-Stop Cleaning) works in three phases:

- 1** The water is used normally and collected by vacuuming
- 2** The water is filtered and purified, completing the water recycling phase
- 3** The water is clean and available for use again

The real revolution lies in the integrated use of the two systems; ICE R Scrub 85 D (NSC) and the ICE Inaqua unit.

A scrubber-dryer that can use the same water for a week, alongside a waste water treatment system able to clean the water used by the scrubber-dryer to reuse it again and again.

Aqua Smart (Non-Stop Cleaning) is an exciting new addition to our range – an innovative system which recycles and filters the water used to clean floors. The system is available within the ICE R Scrub 85 (NSC), or as a separate unit that can be used with any scrubber dryer.

The same water can be re-used for a week (based on 3-4 hours use per day), which not only dramatically reduces water consumption, but also saves the cleaning operator time as they don't have to keep emptying and re-filling the machine.

Specification	ICE R Scrub 85 D
Fresh water capacity	180 Ltr
Dirty water capacity	200 Ltr
Suction width	110.5 cm
Working width	85 cm
Noise level	70 dBA
Power	36 V
Weight	556 Kg
Productivity	5,100 m <sup>2</sup> /h
Dimensions (L x W x H)	196 x 156 x 104 cm
